GPA 3.34/4.00

SMK N 2 Surakarta

Audio Video Tech

This major learns about basic electronics such as logic gates, microprocessor, and microcontroller.

GPA 86/100

About me

I graduated from an “almost” an IT major, a major that focused on digital electronics that requires coding. It builds my interest on programming much more than the electronics itself. So here I am ended up with programming skills and focusing on web development for the basic learning path. I also have some hobbies related to design and aesthetical objects that supports my interest to learn from web development.
